

EuroCAD TAILORING ASSISTANT

The clarity and advantages of traditional geometric design

- 🌐 Classical step by step parametrical pattern design
- 🌐 Perfect mach for the shape and dimensions of the patterns on all sizes
- 🌐 Complete automatic pattern grading, using directly the dimensions from the size table
- 🌐 Automatic pattern reshape to fit individual dimensions of each client - made to measure
- 🌐 Automatic pattern reshape to fit extreme sizes, maintaining the perfect pattern correspondence

EuroCAD Tailoring Assistant is the latest module from the EuroCAD 2D software package and it was developed to cover two main applications in garment design:

- For fashion houses, haute couture boutiques and other companies that produce on demand, made to measure clothes, EuroCAD Tailoring Assistant can provide automatic pattern reshape to fit the individual dimensions of each customer. It can be used for any type of clothes that requires a perfect mach on the client's body, such as night dresses or men's suits.

- For mass garments production, EuroCAD Tailoring Assistant provides full automatic grading on different size sets, and it is capable to grade a single product for several different size tables, for different markets, without any human intervention. For instance, the same shirt, designed only one time as a parametric project, can be automatically graded at a blink of an eye to fit the standard size chart for Belgium and after that, without any intervention can be graded for the standard size set for United States.
